

CERTIFICATION

AOAC[®] Performance TestedSM

Certificate No.

041601

The AOAC Research Institute hereby certifies the test kit known as:

Solus Scientific *Listeria* ELISA

manufactured by

Solus Scientific Ltd.

Unit 9 Mansfield Networkcentre

Millennium Business Park

Concorde Way, Mansfield

Nottinghamshire, NG9 7JZ

This method has been evaluated in the AOAC[®] Performance Tested MethodsSM Program and found to perform as stated by the manufacturer contingent to the comments contained in the manuscript. This certificate means that an AOAC[®] Certification Mark License Agreement has been executed which authorizes the manufacturer to display the AOAC Performance TestedSM certification mark along with the statement - "THIS METHOD'S PERFORMANCE WAS REVIEWED BY AOAC RESEARCH INSTITUTE AND WAS FOUND TO PERFORM TO THE MANUFACTURER'S SPECIFICATIONS" - on the above mentioned method for a period of one calendar year from the date of this certificate (January 3, 2020 – December 31, 2020). Renewal may be granted at the end of one year under the rules stated in the licensing agreement.

APPLICABILITY OF METHOD

Target organism – *Listeria* species (*L. grayi*, *L. innocua*, *L. ivanovii*, *L. monocytogenes*, *L. seeligeri*, *L. welshimeri*)

Matrixes – (25g) – bagged romaine lettuce, hot dogs, frozen raw shrimp, smoked salmon, soft cheese (brie), stainless steel (swab, 1 x 1 in), polystyrene (sponge, 4 x 4 in)

Performance claims - The Solus Scientific *Listeria* ELISA method is considered equivalent to the reference methods.

CERTIFICATION RENEWAL RECORD

Renewed annually through December 2020

METHOD MODIFICATION RECORD

1. January 2018 Level 1
2. December 2018 Level 1

SUMMARY OF MODIFICATION

1. Reformatting and editorial changes
2. Editorial/clerical changes to text to bring the language and style in line with more recently approved products.

Under this AOAC® *Performance Tested*SM License Number, 041601 this method is distributed by:

Under this AOAC® *Performance Tested*SM License Number, 041601 this method is distributed as:

PRINCIPLE OF THE METHOD (1)

The Solus Scientific *Listeria* ELISA method is used for the rapid and specific detection of *Listeria* species in enriched food and environmental samples. The Solus Scientific *Listeria* ELISA method relies on antibodies attached to the wells of the microplate strips that are specific to *Listeria* antigens. Samples are heat treated and an aliquot is added to the antibody coated wells.

Listeria specific antigens present in the samples will bind immunologically to the antibody. After washing to remove unbound material, an enzyme-labeled antibody will bind to the proteins and thus to the well. After a second wash step to remove any unbound enzyme-antibody, the enzyme substrate is added. The substrate reacts in the presence of the enzyme producing a blue color change in the sample well. The substrate reaction is stopped after 30 minutes with the addition of dilute sulfuric acid changing any blue color present in the wells to yellow. [4]

DISCUSSION OF THE VALIDATION STUDY (1)

The Solus Scientific *Listeria* ELISA methods successfully recovered *Listeria* species from all of the food matrixes and environmental surfaces analyzed. Using POD analysis, no statistically significant differences were observed between the number of positive samples detected by the candidate method and the reference methods for all matrixes and environmental surfaces tested.

The results of the inclusivity and exclusivity evaluation demonstrated 100% agreement with expected results for the test panels, and confirmed the high specificity and selectivity of the method to *Listeria* species

The method offers the benefit of the use of the manual immunoassay method and the automated immunoassay method to obtain results. Each method is quick and simple to perform, providing results in less than 2 hours post incubation of the selective enrichment. The small footprint of both methods offers the ability to test in various laboratories. The Dynex DS2 software is user friendly with the ability to track lot information and sample identification quickly and with ease. The Dynex DS2 software and instrument also offer the ability to run multiple assays at one time and has an open platform.
